

# Immune modulation by ELF

- Neiding, Immune and Wageningen University (the Netherlands) study effects of low strength ELF on the primary immune system
- Strong effects in farm animals, when under infection pressure. Any interest to repeat with our support and equipment?
- Cell level effects hard to find, but a breakthrough might be close in humans (positive pilot results)
- Repeatability is a problem, we are interested to cooperate to study confounding factors
- Info: Jan Cuppen
